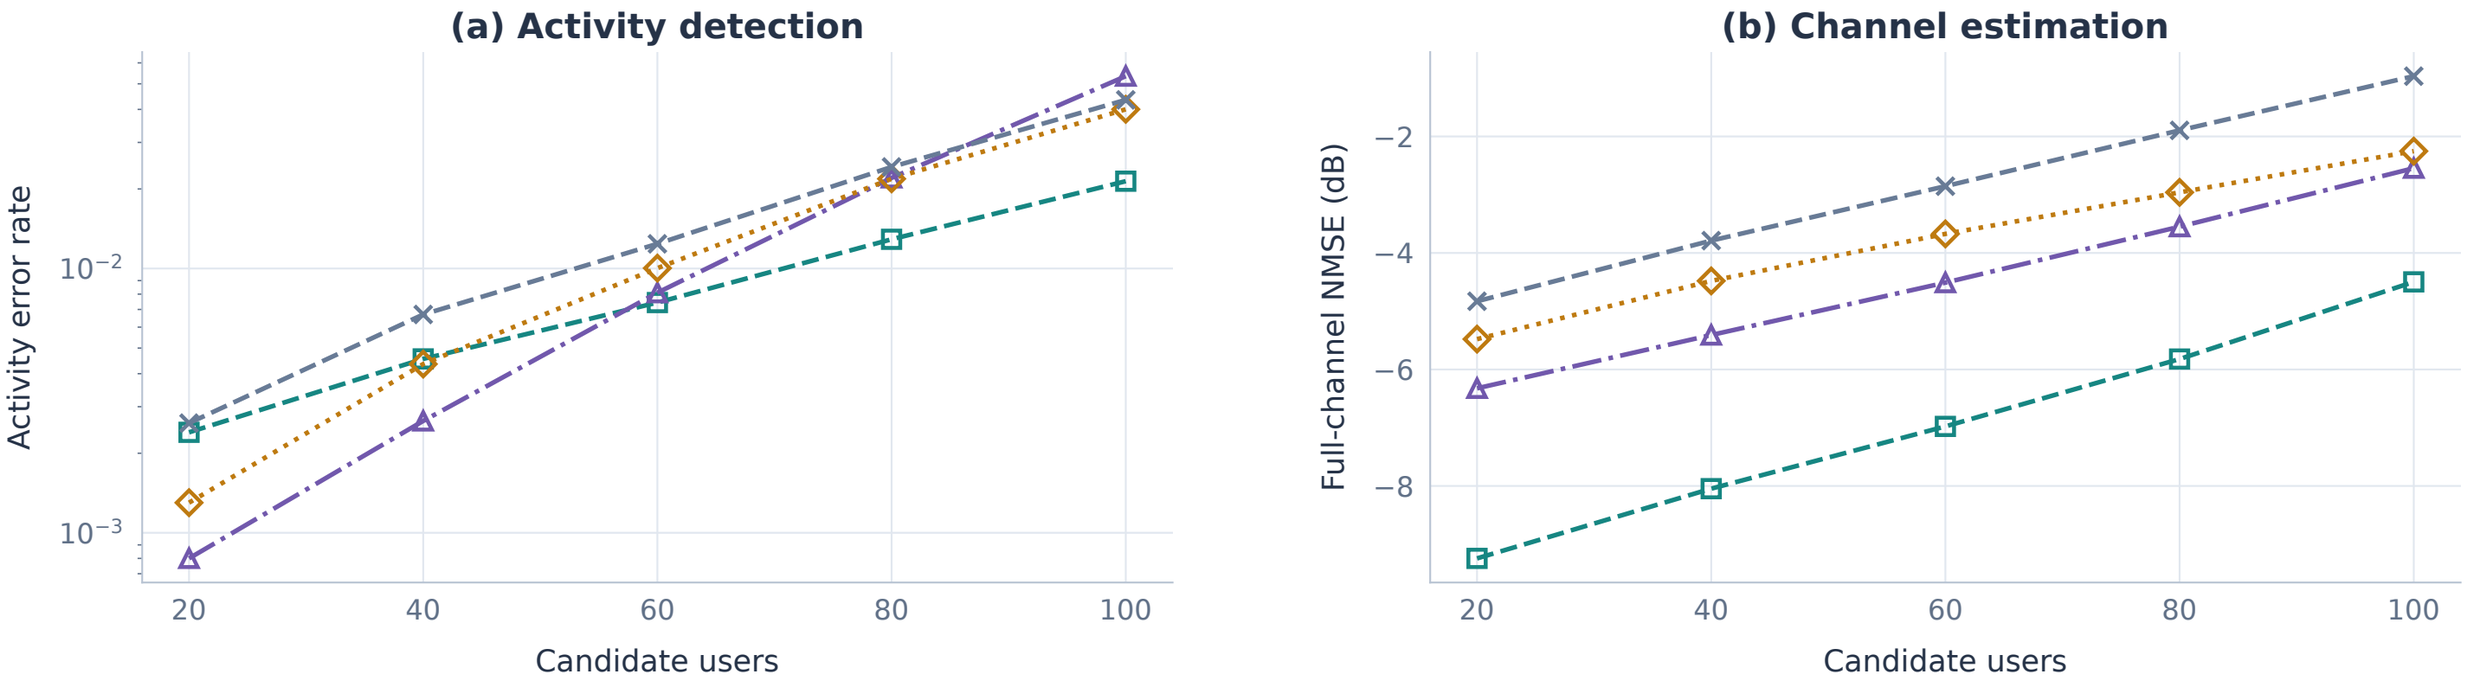
Performance versus candidate users

16 pilot frames | SNR = 0 dB | Activity probability = 0.1

Off-grid SBL (n=500)
GNN-ASPL (n=500)
GAMP-SBL (n=500)
SOMP (n=500)



n = paired physical scenes per condition. Estimated phase and noise.

Curves show pooled point estimates; lower is better in both panels.
